INTRODUCTION

This Annual Planning Information Report for fiscal year 1982 is compiled primarily for use by socio-economic planners. It is an aid for Comprehensive Employment and Training Act (CETA) planners in developing employment and training programs for the coming fiscal year. This report contains a wide range of information on the population, employment, occupations and socio-economic characteristics of the state.

DESCRIPTION OF AREA

Idaho is located in the northwest United States. It is bordered by Washington, Oregon, Nevada, Wyoming and Montana. It is a sparsely populated state with large recreational areas. It has a varied terrain with three major land areas which could be best described as sagebrush, pairie and mountainous. A few of the native resources within Idaho's boundaries are the Clearwater, Salmon, Lost River, and Bitteroot Mountain Ranges along with the Snake, Clearwater and Salmon Rivers. These are beautiful areas and it is not surprising that tourism and recreation has become a large industry for the state.

Idaho has traditionally been an agricultural state but in recent years, manufacturing, especially electronics, has rapidly gained importance. This has eased the state's economic dependence on agriculture. Livestock, cattle especially, is of major importance to the economy. Major crops grown by Idaho's farmers include potatoes, peas, sugar beets, alfalfa seed, and Marion Kentucky Bluegrass seed. Major manufacturing industries include food processing, forest products, phosphate processing into fertilizer, and electronics. Mining has played an important role in the development

of the state and today phosphate rock, silver, lead, and zinc are among the resources being mined.

There is only one Standard Metropolitian Statistical Area (SMSA) in the state which consists of all of Ada County. Boise, the capital city, is in Ada County and has the state's largest city population. The other cities and towns, although smaller than Boise, are spread throughout the state in a mixture of urban and rural areas and allow for a variety of lifestyles.

HIGHLIGHTS

The population of the state has grown considerably since the 1970 census due largely to migration into the state and growth is expected to continue, although not as rapidly as in the 70's. There was a 32.4 percent increase in population from the 1970 to the 1980 census and there is a 1.9 percent increase projected from 1980 to 1982.

The recession in 1980 was felt throughout the state. A major slowdown in employment occurred as the construction and lumber industries were hit hard by rising interest costs. Using preliminary annual averages for 1980, the construction industry suffered a decrease of almost 12 percent from 1979 and the lumber industry dropped 16 percent. Service industries were also affected by a slowing economy. Figures F and G illustrate Idaho's unemployment rate in relation to the other states in the nation.

There was a decrease in total labor force numbers from 1979 to 1980 of 0.5 percent. Nationally, the civilian labor force increased 1.8 percent during the same time period. The labor force total for 1982 is projected

to be 464,254, a 7.1 percent increase over 1980's 433,558 in anticipation of an improving economy.

Although it is impossible to know for certain the direction the economy will take in the future, there is a brighter economic picture ahead predicted for Idaho. The state should see a slow but steady improvement as we approach the end of 1981 and move into 1982.

POPULATION

The population projections in this report are based upon 1970 census data, preliminary 1980 census totals and projections developed by the Research and Analysis Bureau in cooperation with the Lawrence Berkeley Laboratory at the University of California.

Because only the preliminary 1980 census totals were available at the time these projections were made, the 1970 census is still the only source of actual counts broken down by age, sex and race. We must assume that the estimates and projections made during the course of the decade concerning these demographic groups contain an ever increasing possibility of errors. Within Idaho, the problems of projections are most keenly evident in the minority segments of the population. In 1970 the minorities in the state comprised only a small percentage of the total population and, until more detailed results of the 1980 census are received, the accuracy of projections based on so small a segment of the population will not be known.

The census was conducted on April 1, 1980, however, only the preliminary state, county, and city total population results are available at this time. More detailed reports probably will not be available for one to two years after the actual census tabulation. From 1970 to 1980, Idaho should see an increase in its minority population, especially the Spanish-American group. This may not be due as much to growth as to the improved methods of data collection and tabulation in the 1980 census. Therefore, the figures obtained will not be strictly comparable to the 1970 census.

Because the preliminary 1980 census is now available for counties, it is possible to take a look at the change that has taken place in county populations since 1970. Table 3 gives population by county using 1970 and

1980 census data and the projected 1982 figures. Table 4 gives population and labor force information for 1982. The county population distribution is based on 1980 census data and the labor force data is distributed using the most current 1980 labor market information.

Figures A and B are drawn from the Current Population Reports of the Bureau of the Census and are included to indicate trends although they date only to 1977.

Table 2 and Figure C further illustrate the population projections by age, sex and race. Once again, it is necessary to point out the relatively low numbers within the minority population. The problems inherent in projecting with such small numbers are even more pronounced in the labor force statistics that are dealt with in this report. Because small shifts in numbers can make a great deal of difference in percentages from year to year, great care should be excerised while attempting to locate trends among these members of the population.

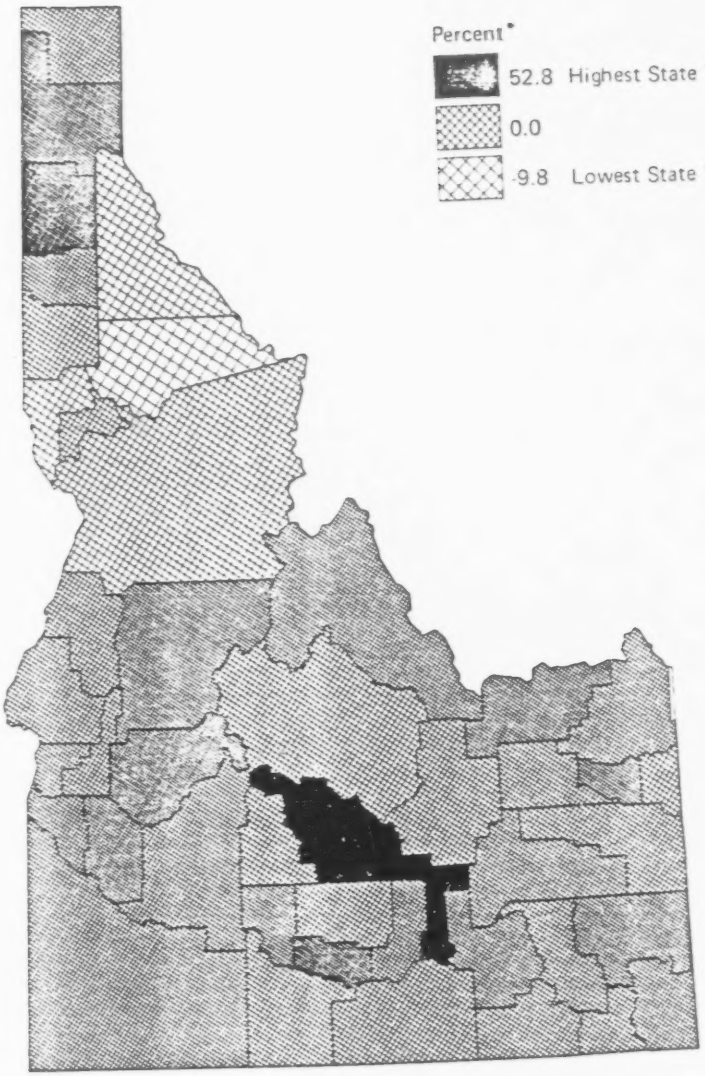
Changes in Idaho's migration pattern over the last decade may well prove to be greater than anticipated when the 1980 census breakdowns become available. The new count may well show a large shift in the 25-29 migration patterns as Idaho's growth slows the out-migration of the past.

Another powerful element affecting Idaho's growth, the birth rate, continues to run well above the national average. According to the Bureau of Vital Statistics, the Idaho birth rate was 22.0 per 1,000 population in 1977 and 1979 which is the highest since 1962 and was 39 percent above 1979 national levels. The estimated fertility rate in 1979 was 97.2 live births per 1,000 women 15-44 years of age which was 43 percent above the national average.

The final tables in this section are reprints of a preliminary report from the Census Bureau giving population and housing unit counts by counties and county subdivisions. They differ somewhat from the county totals on other tables in this planning report but they will provide the user with some of the initial information released by the Census Bureau.

FIGURE A

Percent Change in Population of Idaho Counties 1970—1977



*The intensity of the line patterns showing county data values varies continuously from the lowest value within the State (sparsest line pattern) to the highest value within the State (most dense line pattern). While small variations are difficult to distinguish, the maps give an overall impression of change patterns.

PRELIMINARY REPORTS

1980 Census of Population and Housing

PHC80-P-14

IDAHO

Preliminary Population and Housing Unit Counts

This report is based on preliminary counts of population and housing units as compiled in the 1980 census district offices. The series consists of 56 reports—number 1 for the United States; numbers 2 through 52 for the States and the District of Columbia in alphabetical order rather than in order of publication; and numbers 53 through 56 for Puerto Rico, Guam, Virgin Islands, and American Samoa. Preliminary counts for the Northern Mariana Islands and the remainder of the Trust Territory of the Pacific Islands are not part of this series of reports. These counts will be made available in a separate press release issued for each area.

As of April 1, 1980, the population of the State was 943,629, according to a preliminary count of the returns of the 1980 census. This figure represents an increase of 230,614, or 32.3 percent, from the 713,015 inhabitants enumerated in the 1970 census.

The preliminary count of housing units in the State as of April 1, 1980, was 374,718. This figure, which includes both occupied and vacant housing units, represents an increase of 130,247, or 53.3 percent, from the 244,471 units enumerated in the 1970 census.

This report presents preliminary 1980 census population and housing unit counts for the State, counties, county subdivisions, incorporated places, standard metropolitan statistical areas (SMSA's), and congressional districts.

For SMSA's which have component parts in another State(s), data shown in this report relate only to this State's portion. For the remainder of the SMSA data, see the appropriate State(s) report.

These preliminary figures will be superseded by the final counts to be shown in Advance Reports, series PHC80-V, which will be issued within the next few months. The final counts are subject to further processing and review and may differ from the preliminary figures.

An outline of the publication and computer tape program for the 1980 Census of Population and Housing can be obtained free of charge from the Data User Services Division, Bureau of the Census, Washington, D.C. 20233.

Symbols used in tables. A dash "-" represents zero. Three dots "..." means not applicable, and "(NA)" means not available. The prefix "r" indicates that the count has been revised since publication of 1970 census reports.

Issued November 1980

Table 7 Population and Housing Unit Counts for Standard Metropolitan Statistical Areas (SMSA's): 1980 and 1970

[Counts relate to SMSA's designated as of January 1, 1980. For meaning of symbols, see text]

SMSA's	Population		Housing units	
	1980 (preliminary)	1970	1980 (preliminary)	1970
BOISE CITY, IDAHO				
The area	172 843	112 230	67 789	37 145
Boise City city	102 125	74 990	43 171	25 992
Outside central city	70 718	37 240	24 618	11 153
Ada County	172 943	112 230	67 789	37 145

Table 8 Population and Housing Unit Counts for Congressional Districts: 1980 and 1970

[Counts relate to congressional districts as delineated for the 96th Congress. For meaning of symbols, see text]

The State Congressional Districts	Population		Housing units	
	1980 (preliminary)	1970[1]	1980 (preliminary)	1970
The State	943 629	713 015	374 718	244 623
First	487 933	356 859	199 097	126 789
Second	455 696	356 149	175 621	118 004

[1] Population counts for congressional districts are based on 1970 census complete-count data; housing unit counts are based on 1970 census sample data. These counts may not add to State totals because of post-1970 census corrections which were not assigned by congressional district and also because of sampling variability for housing unit counts.

LABOR FORCE AND EMPLOYMENT STATUS

Idaho's 1982 labor force size and composition is illustrated in Table 9 and Figures D and E.

Table 9 is an age and sex breakdown of the labor force while Figures D and E offer a comparison of the labor force rates for the years 1960, 1970, 1980 and 1982.

The participation rates for men, 16-17 and 25 through 44 years old remain fairly stable with those projected for 1980. However, the other age cohorts reflect a national trend towards a decrease in male participation rates. When the 1980 census results become available, we may find that our 1980 projections were a little too high for men. But again, this is an area where it is important to note trends and there has been a decrease in rates.

The participation rates for all women show increases. This too follows a national trend. Women have been entering the labor force in large numbers in recent years, due to several factors including increased job opportunities for women and more women seeking employment for economic reasons.

TABLE 9

LABOR FORCE PROJECTIONS

IDAHO FISCAL YEAR 1982

		Labor Force	
Age	Total	Male	Female
16-17	24,931	12,899	12,032

UNEMPLOYMENT

The projected 1982 unemployment rate for Idaho is 6.4. Figure H compares rates for 1970, 1980 and 1982. The recession in 1980 had an effect on the rate originally projected for that year and now that more current 1980 data is available, the 1980 rates shown on Figure H have been revised from those published last year. This is important to note because although 6.4 seems high for 1982, it does show an improvement over the 6.6 rate for 1980. The first two charts in this section, Figures F and G, illustrate Idaho's 1980 unemployment rate and the change in unemployment rate in relation to the other states for 1980.

Although the overall rate is subject to various economic fluctuations, the relationships between the various age, race and sex categories should remain substantially the same. Table 11 illustrates the high rates in the younger age groups while Figure H indicates the same high rates among the non-white segments of the population.

OCCUPATIONAL INFORMATION

Table 16 compares occupational distributions of employment by sex for the years 1970, 1977, 1978 and 1979. 1970 data are from the census, 1977, 1978 and 1979 are from the Current Population Survey (CPS).

Tables 17-21 represent employment projections for Vocational/Technical Occupations in Idaho 1981-1986. These projections are based upon 1970 census occupational staffing patterns and employment projections done by the Idaho Department of Employment, Research and Analysis Bureau.

The last two tables in this section provide job opening information from the local Job Service offices in the state. Table 22 provides information on applicants and job openings for selected occupations. Table 23 gives information on openings which remained unfilled at the end of the quarter. These tables were taken from a quarterly report, Unfilled Job Openings and Available Applicants, 4th Quarter, 1980, which is published by the Research and Analysis Bureau. Because there is constant change in openings available, as new openings occur and other jobs are filled or cancelled, these tables can only provide a feel for the available openings in the state.

SOCIO-ECONOMIC CHARACTERISTICS

While these types of statistics are particularly useful in planning, they are also difficult to obtain on a regular basis. Although the census offers a good breakdown of many of these characteristics, it is also woefully out of date at this time. Included in the following pages are reprints of tables found in the Survey of Income and Education (SIE), and tables of information contained in SIE and Current Population Survey (CPS) publications.

The SIE, carried out in the spring of 1976, was conducted to fulfill requirements of the Education Amendments of 1974 (Public Law 93-280, Section 822(a). The SIE was administered by the Bureau of the Census at the request of the Department of Health, Education, and Welfare. The Bureau of the Census carried out this legislative mandate by augmenting the regular March 1976 Current Population Survey with a supplemental general population sample of approximately 151,000 household interviews.

The major purposes of the SIE were to collect information necessary to (1) determine the number of school age children in each state living in families with incomes below the poverty level; (2) ascertain the number of persons who because of limited English-speaking ability are in need of bilingual educational teaching guidance and counseling; and (3) provide information on a number of other subjects including school enrollment, food stamp and public assistance recipients, housing tenure and outlays, liquid asset holdings, child and adult disability, and public and private health benefit coverage.

Table 24 SELECTED CHARACTERISTICS OF FAMILIES AND UNRELATED INDIVIDUALS, BY TOTAL MONEY INCOME IN 1975, FOR IDAHO: SIE

(NUMBERS IN THOUSANDS. FAMILIES AND UNRELATED INDIVIDUALS AS OF SPRING 1976. RACE AND SPANISH ORIGIN, AGE, OCCUPATION, WORK EXPERIENCE, AND EDUCATIONAL ATTAINMENT CHARACTERISTICS ARE SHOWN FOR HEAD IN HUSBAND-WIFE FAMILIES AND HEAD IN OTHER FAMILIES. SEE NOTE IN TEXT. FOR MEANING OF SYMBOLS, SEE TEXT)

Public Assistance

The following tables provided by the Idaho Department of Health and Welfare show the January 1981 age and sex distribution for public assistance recipients and a January 1981 Summary of Public Assistance payments by county by region. There is also a table showing the percent of population receiving assistance by county and region and another showing food stamp activity for November 1980.

Persons in Poverty

Table 38 provides poverty information by sex, age and race for the state. The sex and age breakouts of the population are taken from projections provided earlier in this report. The persons in poverty total was estimated from 14 year olds and older who are in poverty based on 1970 census data and updated by the 1976 Survey of Income and Education (see Tables 24-26, pages 51-56) and distributed by demographic groups using Fiscal Year 1980 ESARS (Employment Service Automated Reporting System) data. The racial breakdown of the population was also taken from ESARS data and 1980 census information.

Table 4 on page 12 gives estimated persons in poverty by county.

This section on poverty also contains a table detailing the Office of Management and Budget Poverty Levels for Fiscal Year 1981.

TABLE 38

IDAHO

PERSONS IN POVERTY

BY SEX, AGE AND RACE

1982

	Population	Persons in Poverty[1]
Total	961,337	60,811
Sex		
Male	478,447	25,911
Female	482,890	34,900
Age		
14-15	35,831	1,919
16-19	74,531	12,370
20-21	34,115	6,959
22-44	305,931	34,890
45-54	87,887	2,964
55+	180,260	1,709
Race/Ethnic Group		
White (not Hispanic)	881,222	54,095
Black (not Hispanic)	2,767	506
Hispanic	54,717	4,046
American Indian or Alaska Native	10,714	1,447
Asian or Pacific Islander	6,058	517
Other	5,859	199

(1) Eligible population estimated from 14 year olds and older who are in poverty based upon 1970 Census data, updated by the 1976 Survey of Income and Education and distributed by demographic groups using Fiscal Year 1980 ESARS data.

TABLE 39

OMB POVERTY LEVELS FOR FISCAL YEAR 1981

Family Size	All States Except Alaska & Hawaii		Alaska Only		Hawaii Only	
	Non-Farm	Farm	Non-Farm	Farm	Non-Farm	Farm

Source: Employment and Training Handbook No. 309 (ESARS)

ESARS

The last section of this report is a copy of the latest (Fiscal Year 1980) Department of Employment ESARS report. ESARS stands for Employment Service Automated Reporting System and is a matrix of information concerning job applicants on file at local Idaho Job Service offices. Because the selection process is based simply on those members of the labor force who chose to list themselves at a Job Service office, the system is obviously not designed to be a representative sampling of the Idaho labor force. If this restriction is kept in mind, however, the level of detail in these matrices can be useful when trying to form an image of the Idaho labor pool.
